SHEEPDOG, OLD ENGLISH
DOB: 05/25/01 FEMALE

Thank you for bringing your dog to us for radiographic orthopedic examination. The results of our examination(s) are given below:

Definitive Hip Exam (dog 18 months or older):

The radiographs of your dog's hip joints show signs of **MODERATE** hip dysplasia.

Elbow Exam: Normal elbow joint(s).

Comments: There is a moderate amount of osteoarthritis in both hip joints. Additionally, there is a mild to moderate amount of subluxation (partial) dislocation of both femoral heads. These changes are consistent with bilateral hip dysplasia.

Date: 27-May-04
